

## Framed Fuji Crystal Archive Prints

continue to be the most collected display option of Mangelsen clients. Designer quality framing with the latest styles and colors will make your image a favorite focal point in any room of your home or office.

Fuji Crystal Archive Prints are the finest professional quality prints available in the industry today, making these papers an excellent choice for fine art reproductions and high resolution photographic displays. Fuji fine art prints feature the most vivid color reproduction, brilliant whites and distinct highlight details. These papers deliver beautiful prints, with excellent image stability, consistency and performance.

The printed image is framed with museum quality framing materials, including 100% acid free, bevel cut matting with a decorative v-groove or fabric covered wood liner. The image is protected by Natureview A/R® glass by TruVue®, which appears invisible and helps to reduce reflected light to enhance viewing.

Finally, the image is finished with a fine wood moulding chosen from an extensive array of styles, stains and finishes. Framing standards are selected by our certified professional framers to complement each limited edition image. Custom framing options are available to accommodate your personal taste or décor.

The framed image comes ready to hang on our wall buddies® hanging system. Every image is meticulously inspected to meet our exacting standards, with a lifetime workmanship guarantee.

All Mangelsen limited edition prints are assigned a unique number and hand-signed by the artist. Each image includes a certificate of authenticity. Framed Fuji Crystal Archive Prints ship protected in high quality, sturdy packaging or wooden crates. All images are shipped fully insured to your home or office.
